THERMO-SIL PRO™ 9600

HIGH SOLIDS SILICONE COATING

THERMO-SIL PRO™ 9600

HIGH SOLIDS SILICONE COATING

Thermo-Sil Pro™ is the ultimate high solids silicone coating for professionals in the roofing industry. The advanced direct-bond technology provides extreme adhesion and proven protection against high winds and weather.

The monolithic nature of the silicone ensures full coverage over the roof by filling all cracks and crevices. Full coverage, coupled with the self-leveling characteristic, makes it a user-friendly product for all application types including squeegee, roller or sprayer.

This single-coat product protects the building from UV rays and high winds, and leaves building occupants comfortable due to the high Solar Reflective Index (SRI) of 0.87. Thermo-Sil Pro High Solids Silicone is versatile and can be installed on multiple substrates, with or without spray polyurethane foam. Substrate surfaces include masonry, granulated BUR/Mod-Bit, granulated APP, metal, concrete and single-ply membranes.

YOUR OPTIMAL SOLUTION FOR...

- Cost-saving alternate solution to re-roofing the building structure
- Coating metal buildings to prevent rust
- Low-sloped or flat roof systems, vertical walls, masonry, metal and more!

PROTECTING THE BUILDING

Thermo-Sil Pro High Solids Silicone protects the building from extreme damage such as ponding water and high winds. Prolong the building with a product certified in Miami Dade and proven to protect buildings in the toughest hurricane-wind situations.
